int1 – Assign your internal ip-address to this interface int1 indicates that this is connected to the port 1 on the device.. In the above diagram:ext0 – Assign your external ip-address to this interface ext0 indicates that this is connected to the port 0 on the

device.. Therefore you need one UCC certificate with the CN for the cluster FQDN and/or cluster IP, and SANs for each ASA in the cluster: ASA-1 FQDN and/or IP, ASA-2 FQDN and/or IP, and so on.. While the example mentioned here was done on Cisco ASA 5520 model, the same configurations will work on other Cisco ASA 5500 series.. 1) Obtain One UCC with multiple SANs (Subject Alternative Name extensions) with each ASA FQDN/IP included.. On a production environment, it is highly recommended to implement two Cisco ASA firewall (or VPN) in high available mode.. fail3 – Assign an internal ip-address to this interface that will be used between the primary and secondary devices during failover. 34bbb28f04 [The Shipping System Laytime Calculation Free](#)
